I am Raihan Zaki Alhafiz, an Informatics Engineering student at Sebelas Maret University with a focus on Full Stack Web Development. I have experience in developing modern and responsive web applications using Laravel, Vue.js, and React. Skilled in both front-end and back-end development, including building interactive user interfaces, RESTful APIs, authentication systems, and database integration. With high enthusiasm for technology, I continuously improve my technical skills through real-world projects and exploration of modern development tools, committed to delivering scalable and high-quality web solutions.

Education Level

Universitas Sebelas Maret - Surakarta , Indonesia

Aug 2022 - Aug 2025

Diploma in in Informatics Engineering, 3.80/4.00

Work Experiences

Politeknik ATI Padang - Jl. Simpang Tabing, Bungo Pasang, Kec. Koto Tangah, Kota Padang, Sumatera Barat

Dec 2025 - Jun 2026

Internship

Responsible for carrying out computer-based information technology activities, including planning, analysis, design, implementation, development, and operation of information systems as a Full Stack Developer. Experienced in developing and maintaining web applications using modern technologies such as Laravel and Vue.js. covering both front-end and back-end development. The responsibilities include managing information technology infrastructure, information systems, and multimedia systems, as well as performing system maintenance, troubleshooting, optimization, and technical support to ensure efficient and reliable system performance.

PT Media Sarana Data - Sleman, Daerah Istimewa Yogyakarta

Aug 2024 - Jan 2025

Internship

This project aims to develop an integration system between Sentry, an issue monitoring platform, and OpenProject, a project management system, to automate the issue transfer process and improve task management efficiency in software development. The system is designed to overcome the limitations of error-prone and time-consuming manual processes, by providing key features such as user authentication, issue statistics dashboard, project management, and integrated issue management. In addition, there is a user page that can only be accessed by admins to manage user data, including adding, editing, deleting, and changing user passwords. Through this system, the workflow of the development team becomes more structured and productive, supporting the achievement of project goals in a more effective and organized manner.

UNS - Web Development Project - Surakarta, Jawa Tengah

May 2023 - Jun 2023

Project

This project aims to build a car rental website that uses client-server architecture, with three types of users: renters, car owners, and admins. Renters (client 1) can view car details, make orders, and cancel orders. Car owners (client 2) have the ability to manage their profiles and add or edit a list of cars to be rented out. Meanwhile, the admin has full access rights to manage all data and activities that occur on the website, including bookings, user data, and car listings. The system is designed to provide an easy-to-use, efficient, and integrated experience for all parties involved in car rental.

UNS - Application Mobile Development - Sukoharjo, Indonesia

Aug 2023 - Sep 2023

Project

This project aims to develop a movie ticket booking mobile application using the Flutter framework, designed to provide an easy and modern user experience. The app allows shoppers to login and register through integration with a Google account. Buyers can view a list of movies currently showing in theaters, access movie details including synopsis and ratings, and select seats according to their preferences. With an intuitive interface and functional features, the app aims to ease the process of booking movie tickets in a practical and efficient manner.

Dukcapil Sukoharjo - Sukoharjo, Indonesia

Feb 2024 - Jun 2024

Internship

This project aims to develop a web-based system designed to facilitate data collection of vulnerable populations and make it easier for the community to report the data quickly and efficiently. This system will replace a previous service that is no longer accessible due to abandonment by the previous programmer. With a more user-friendly approach, the website will provide features that enable accurate data collection of vulnerable populations, simple reporting services, and easy access for the community and Sukoharjo Dukcapil to ensure fair, comprehensive, and effective services for all levels of society.

PT Media Sarana Data - Sleman, Daerah Istimewa Yogyakarta
Internship

Feb 2025 - May 2025

The Booking Appointment system was developed to address the inefficiencies of manual service bookings in sectors like clinics and consultations, offering a faster and more accurate web-based solution. Built using Laravel and Vue.js with a RESTful API and following the Agile Scrum framework, it features user authentication, service scheduling, reviews, and Mapbox integration. The system supports key functionalities such as email verification, OTP-based password resets, booking status tracking, and meeting location maps. Testing showed 100% success across eight main scenarios, proving the system's effectiveness in enhancing service accessibility and reliability.

Organisational Experience

MPK - Bukittinggi
chairman

Sep 2019 - Dec 2021

The Class Consultative Assembly is an official organization to assist the work of the school community. Sometimes found in Junior High School and Senior High School, MPK plays an important role in motivating students to actively participate in the school environment.

KKR - Bukittinggi
Sekbid lingkungan hidup

Feb 2020 - Dec 2021

The Environmental Maintenance Section has important responsibilities in compiling, planning, and designing programs and activities related to environmental maintenance. Their main tasks include developing innovative concepts to maintain ecosystem balance and improve environmental quality. In addition, the section also reviews the implementation of existing technical policies to ensure their effectiveness and relevance to community needs. With a data-driven approach, the section strives to create holistic solutions for the protection and sustainable management of natural resources.
